

ABSTRACT OF THE DISCLOSURE

The present invention relates to an adhesive tape dispenser which includes a drawing trigger and a cutting lever close to each other to be pulled by a user's finger and contains an adhesive tape with various width therein, so that the convenience of users can greatly be enhanced and the efficiency in using an adhesive tape can be improved. The adhesive tape dispenser comprises a case body; a drawing means including a trigger protruded out of the case body and a pair of drums rotated by pulling the trigger; a cutting means including a cutting lever provided adjacent to the trigger outside of the case body, a lever operated by pulling the cutting lever, and a cutter; and a reverse control means to prevent a backlash of the drums in operating the drawing means.
